Designed around a vision of collaboration and customer choice, Lotus Domino™ is a rock-solid, integrated foundation for messaging and collaborative e-business solutions.

Domino is proven.

Lotus Domino is the world's most widely deployed messaging and application platform, with over 38 million users and counting. Based on a proven architecture that has been in production for more than ten years, it is the foundation for many of the largest networks in use; some supporting over 250,000 users.

Domino is scalable and manageable.

Domino provides an integrated infrastructure for e-mail, Web access, Calendaring & Scheduling, collaborative workspaces, bulletin boards and newsgroups. There's just one system to deploy and manage. Intuitive administrative tools let you proactively manage your network to an optimal level of service. And Domino scales to take full advantage of even the most powerful server platforms.

Domino is the ultimate in availability.

Where uninterrupted access is a business imperative, Domino clustering services provide failover for applications—including Web applications—in addition to dynamic load balancing and partitioning. State-of-the-art transaction logging ensures the utmost in data integrity and fast recovery.

But peace of mind takes more than technology. It also takes personal attention. Whatever your unique requirements, you can rely on the top-rated, global services of Lotus, IBM® and our extensive network of business partners. Whether it's technical assistance, upgrade tools or the strategic approach of Lotus Consulting, we have the support you need. Together, we'll ensure that you get the highest possible return on your Domino infrastructure investment.

"We have five administrators supporting our entire Domino infrastructure of 9,000 users, and a fast-growing organization that doubled in size last year. There's no other product that provides the scalability, reliability, and simple administration of Domino."

KAREN RIST, MANAGER OF MESSAGING AND GROUPWARE SERVICES, PEOPLESOFT.

"Today, Notes and Domino keep our mobile and remote users connected as if they're in the office."

MARCUS WONG, SENIOR NETWORK ANALYST, FUJITSU COMPUTER PRODUCTS OF AMERICA.

"The biggest thing we got from the upgrading and standardizing on Notes and Domino was synergy. It creates opportunities to do things we haven't even thought of yet."

JOHN GUSTAFSON, ENTERPRISE ARCHITECT FOR LOTUS NOTES, 3M.

"Domino R5's new features greatly enhance our ability to integrate advanced business workflow and back-end databases into our messaging infrastructure for an even higher level of productivity."

DALE CYBELA, SENIOR CONSULTANT, DELUXE ELECTRONIC PAYMENT SYSTEMS.

Domino facilitates collaboration. From industrial-strength messaging, to interactive applications with connectivity to back-office systems like supply chain management and sales force automation, thousands of e-business solutions run on Domino today.

Domino is the premier platform for collaborative Web applications.

Domino's integrated application services—such as security, workflow and content management—optimize the platform for rapid delivery of the collaborative Web applications you need to initiate and strengthen key business relationships. Built-in connection services provide live access to leading relational databases, transaction systems and ERP applications. And you can use leading third party Web development tools along with Domino's integrated development environment.

No application platform makes it easier to create self-service solutions that leverage back-end systems, from e-commerce to supply chain management to customer care.

Domino is standards-based.

Domino offers the industry's most comprehensive support for Internet messaging standards, with Internet addressing, SMTP routing and MIME content support all native. Plus full support for E/SMTP, S/MIME, SSL, POP3, IMAP4, LDAP, HTTP, HTML, SNMP and all the rest. Domino delivers the utmost in interoperability with your current tools and systems. And the ultimate in extensibility, so you can more easily reach out to your customers and partners.

Domino is easy to extend.

Lotus offers an unbeatable array of integrated products to extend and add value to your Domino infrastructure, including:

- Lotus Fax for Domino™ offers network-based fax capabilities, direct from Lotus Notes® clients.
- Lotus Mobile Services for Domino provide access to Domino via wireless devices, from pagers to data-capable cell phones to PDAs.
- Lotus Sametime™ offers real-time collaboration over Domino networks and AOL's Instant Messenger (AIM) service.
- Lotus QuickPlace™ lets you set up a Web-based, collaborative work area in minutes.
- Lotus Domino.Doc™ delivers distributed, enterprise-wide document management.
- Lotus LearningSpace Anytime™ integrates key methods of teaching and learning, allowing you to hold live training sessions online over your intranet or the Internet.
